

# Workshops

## Experience the forefront of neurology

Expand your knowledge and expertise in EMG procedures, unlock new possibilities with botulinum toxin therapy and discover the power of ultrasound examination in diagnosing and treating peripheral nerve and muscle disorders.

Sign-up for the WCN 2023 workshops and enhance your practice!

### 1. [EMG Workshop](#)

## EMG Workshop

Hall 520F | October 15

Join us for an exciting workshop focused on unlocking the secrets of nerve conduction studies and EMG techniques! Discover the fundamental aspects and avoid common pitfalls in nerve conduction studies. Dive into the world of facial EMG and gain invaluable knowledge on techniques and interpretation. Uncover the pivotal role of EMG in diagnosing demyelinating neuropathy, myopathy, and ALS.

By the end of this workshop, you will:

1. Develop a strong foundation in EMG, including nerve conduction studies in limbs and facial nerves, as well as needle EMG techniques.
2. Gain hands-on experience in techniques, demonstrations, and pitfalls to avoid, enhancing your skill set.
3. Understand the significant contribution of EMG in diagnosing neuromuscular disorders such as demyelinating neuropathy, myopathy, and ALS.

Don't miss this incredible opportunity to expand your knowledge and expertise in EMG procedures.

## 2. [Botulinum Toxin Therapy Workshop](#)

# What is New in Botulinum Toxin Therapy

Hall 519A | October 15

Join us for an immersive workshop designed to equip participants with the essential skills in utilizing botulinum toxin for various indications. Delve into the world of neurology and explore the extensive applications of this versatile toxin beyond its traditional boundaries.

Throughout the course, participants will:

1. Gain hands-on experience and comprehensive knowledge in the use of botulinum toxin for both neurological and non-neurological conditions.
2. Discover the vast opportunities and understand the limitations associated with the administration of botulinum toxin.

Expand your expertise and unlock new possibilities with botulinum toxin in this engaging workshop.

### 3. [Neurosonology Workshop](#)

# Neurosonology Workshop

Hall 519A | October 17

Unlock the power of ultrasound examination in diagnosing and treating peripheral nerve and muscle disorders at our highly anticipated workshop! This session is designed to provide you with a comprehensive understanding of the immense value and clinical applications of muscle and nerve sonography.

By the end of this workshop, you will be equipped to:

1. Accurately detect fasciculation and differentiate myopathies based on structural changes.
2. Identify various neuropathies and determine the site of lesion in compression neuropathies using neuro-sonography findings.
3. Consider a wide range of possibilities in the differential diagnosis of neuro-muscular disorders, drawing from the extensive review of neuro-muscular sonography results.

Don't miss this incredible opportunity to improve your diagnostic skills and stay at the forefront of neuro-muscular imaging.
